

1        SIMPLIFIED "T" INTERCHANGE DESIGN FOR A "T"  
2        INTERSECTION OF A FOUR LANE EXPRESSSWAY WITH A  
3        TWO LANE HIGHWAY

4  
5        ABSTRACT OF THE DISCLOSURE

6  
7        A simplified "T" interchange design is provided for  
8        an intersection of a four lane expressway with a two lane  
9        highway. The design uses one, short, two lane bridge over  
10       two lanes of traffic. The design would be very  
11       inexpensive to build when compared to the cost to build  
12       a conventional interchange. The design would be very safe  
13       for vehicles passing through the interchange from any  
14       direction. Vehicles are never required to cut across  
15       lanes of high speed traffic when making transitions  
16       between the two lane highway and the expressway.
